## PatientSecure™

PatientSecure is a biometric patient identification system, by HT-Systems, that ensures patient safety and protects patient privacy.

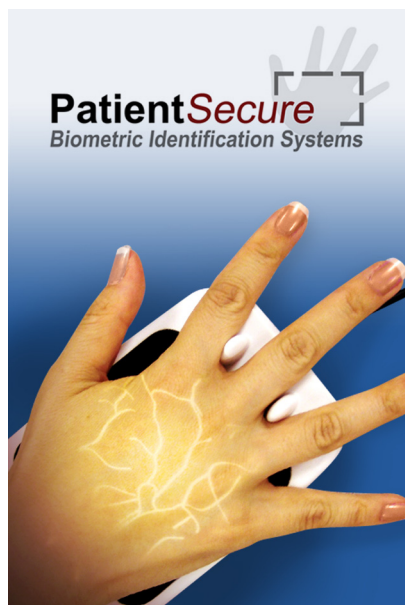

Positive patient identification is the most important step in ensuring that the right care is provided to the right patient. With an increase of medical identity theft, healthcare providers need a solution that assures patient's safety and protects their personal information. However, the patient identification process at registration is challenging in a busy healthcare setting and can result in duplicate medical records and overlays. These errors are not only a direct threat to patient safety but are also costly and time consuming. In addition, patients are concerned about their privacy and are reluctant to give out their social security number.

### How it works

With HT System's PatientSecure, the patient's identity is confirmed at the point of care using cutting-edge Palm Vein Pattern Recognition Biometrics. Once enrolled in the system, returning patients simply have their palms scanned and the PatientSecure system retrieves their medical records. It can even identify an unconscious patient in an emergency situation.

PatientSecure utilizes a near-infrared light wave scanner to capture the vein pattern in a patient's palm. This scan produces a unique biometric template that is a digital representation of the vein pattern. Vein patterns are highly unique and this biometric technology is 100 times more accurate than that of fingerprints. The scanned biometric data is encrypted thereby protecting the patient and healthcare provider. PatientSecure integrates with your existing EMPI, EHR (EMR) and patient registration system. HT Systems uses cutting edge technology to make implementation quick and effortless.

HT System's PatientSecure protects patients and healthcare providers. It improves patient safety, stops duplicate medical records and overlays, prevents medical identity theft and insurance card sharing while accelerating the registration process. In addition, ask about the PatientSecure ROI Calculator which provides a detailed ROI analysis suitable for IT/Finance committee presentations.

### Why PatientSecure

**Patient Safety** – Ensure the Right Care is given to the Right Patient

**Efficiency** – Puts a stop to duplicate Medical Records

**Customer Service** – Accelerates Registrations

**Integration** – Integrates with your existing EMPI, EHR(EMR) and Patient Registration System

**Crosses All Platforms** – A patient enrolled at the hospital can be authenticated at clinic or doctor's office

### MedAssets' Value

MedAssets improves healthcare providers' margin and cash flow through revenue cycle and supply chain initiatives as well as decision support technology and services.

### About MedAssets

MedAssets (NASDAQ: MDAS) partners with healthcare providers to improve financial strength by implementing spend management and revenue cycle management solutions that help control cost, improve margins and cash flow, increase regulatory compliance and optimize operational efficiency. MedAssets serves more than 125 health systems, 3,300 hospitals and 40,000 non-acute healthcare providers. For more information, go to [www.medassets.com](http://www.medassets.com).

## What Your Peers are Saying About PatientSecure, the Nation's Leading Patient Identity Management Solution

"There is great importance in properly identifying the patient. The main benefit from the [PatientSecure] system is ensuring the right care is given to the right person"

*Dr. Roger Ray, Chief Medical Officer,  
Carolinas HealthCare System*

"In addition to patient safety, our principal driver [in implementing PatientSecure] was cost avoidance [from lawsuits] by eliminating duplicate records and the potential for medical record overlays. One negative outcome for one patient due to a medical record overlay can easily cost our health system millions of dollars."

*Lindsey Jarrell, CIO,  
BayCare Health System*

"Improper patient identification can have tragic consequences. Conversely, a dependable patient identification method such as PatientSecure has the reverse effect. Patients are much safer and fraud and identity theft are averted."

*Marcy Feit, CEO,  
ValleyCare Health System*

"There's a lot of moving parts in the revenue cycle and this front end component [PatientSecure] is one of several items that make it more efficient on the operational side."

*Craig Richardville, CIO,  
Carolinas Healthcare*

"Since we went live, registration is faster because patients returning for repeat visits are not asked to provide their ID or insurance cards each time. They just place their palm on the scanner and within seconds their exact medical record is retrieved."

*Rogel Reyes, Director of Patient Access,  
ValleyCare Health System*

"The response from our patients has been extremely positive. Less than one percent have decided not to enroll and we already have over 100,000 patients in our database."

*Jim Schwamb, VP, PFS,  
BayCare Health System*

"Once a patient is scanned into the database, subsequent registrations are much faster and more private."

*Kathy Shivers, Patient Access Director,  
CMC Mercy Hospital*

"PatientSecure helps us comply with the new FTC Red Flag Regulations while speeding up our existing registration process."

*Lynda Gorke, Director of Management Support,  
BayCare Health System*

"Fix inaccurate patient identification processes now before more people have to go through the horror I went through to clear my name. "I'm just a huge fan of what PatientSecure is doing and if hospitals caught on to that it could make a big difference."

*Anndorie Sachs, Victim of Medical Identity Theft, Mother of  
four who was accused of giving birth to a drug addicted baby.*

"When a simple biometric device can ensure patient safety, prevent fraud and improve billing, it's absolutely worth considering."

*Michael McBride, Editor in Chief,  
Health Management Technology*
